

Sunflowers turn according to the position of the sun. In other words, they “chase the light.” You might already know this, but there is another fact that you probably do not know!

Have you ever wondered what happens on cloudy and rainy days when the sun is completely covered by clouds?

This is an interesting question. Isn't it?

Perhaps you think the sunflower withers or turns its head towards the ground. Is this what crossed your mind?

Well, that's incorrect!

This is what happens.

They turn towards each other to share their energy.

Nature's perfection is amazing. Now let's apply this reflection to our lives. Many people may become low-spirited, and the most vulnerable ones, sometimes, become depressed.

How about following the example of the beautiful sunflowers i.e. "Supporting and empowering each other". Nature has so much to teach us.

Wishing everyone a "Sun flower" trait of turning towards each other on their cloudy and gloomy days.

Especially during these dark days of Corona pandemic.

Spread goodness...it will come back to you

If Earth Day makes you think about how you can do more to make sure the air we breathe is clean and the water we drink is pure, then it is doing its job.

If Earth Day gets you to worry about the safety of our food supply, or of wild places, or of wildlife, then it is serving its purpose.

Most of us need a special day set aside to prod us to care about them. We owe a debt to Earth Day for that.

Ever increasing and never ending human demands has put our mother Earth in imminent danger. Knowingly or unknowingly we are bleeding HER.

Earth calling on EARTH DAY

Stay safe...Stay Strong...and For Each Other.
